## Introduction

Facilities management (FM) is gaining attention and significance in recent years. With the incorporation of more complex systems and features into our living environment, new challenges will also be encountered by technical professionals to design, construct and maintain a facility that meets its functionality and desired performance.

This seminar will discuss the current trends and good practices in the maintenance of facilities and will be introducing Singapore's first standard on the Maintainability of facilities (SS 652) with the intention of providing guidance to the built environment professionals on the good practices to design, construct, manage and maintain facilities.

The standard is relevant to practitioners over the entire value chain in a developmental project, including architects, engineers, contractors and FM professionals.

This seminar hopes to encourage the design and construction professionals to adopt this standard, and to incorporate the recommended good practices which will facilitate the subsequent management and operation of the facility.

### Who Should Attend?

- Architects and designers
- Contractors
- Professional engineers
- Qualified persons (QPs)
- Registered inspectors (RIs)
- FM professionals
- Workplace safety and health officers
- Suppliers and manufacturers

### What You Will Learn

- Overview of the new Singapore Standard on Maintainability of facilities
- Good practices and areas of concern for consideration in the maintenance of facilities
- Trends in the design for maintainability
